- 1  **A practical clustering algorithm for static and dynamic information organization** 82%
Javed Aslam , Katya Pelekhev , Daniela Rus
Proceedings of the tenth annual ACM-SIAM symposium on Discrete algorithms January 1999
- 2  **Modeling methodology: Supply chain agent decision aid system (SCADAS)** 80%
Anurag Gupta , Larry Whitman , Ramesh K. Agarwal
Proceedings of the 33rd conference on Winter simulation December 2001
Supply chain decisions are improved with access to global information. However, supply chain partners are frequently hesitant to provide full access to all the information within an enterprise. A mechanism to make decisions based on global information without complete access to that information is required for improved supply chain decision making. Mobile agents can support this requirement and these are the programs that can be initiated on a single host and then migrate from host to host over ...
- 3  **Agents2Go: an infrastructure for location-dependent service discovery in the mobile electronic commerce environment** 80%
Olga Ratsimor , Vladimir Korolev , Anupam Joshi , Timothy Finin
Proceedings of the first international workshop on Mobile commerce July 2001
In recent years, the growth of Electronic Commerce and Mobile Computing has created a new concept of Mobile Electronic Commerce. In this paper we describe the Agents2Go System that attempts to solve problems related to location dependence that arise in a Mobile Electronic Commerce environment. Agents2Go is a distributed system that provides mobile users with the ability to obtain location dependent services and information. Our system also automatically obtains a user's current geographical location ...
- 4  **Programming for observability support in a parallel programming environment** 80%
Francesco Gregoretti , Zary Segall
Proceedings of the 1986 ACM fourteenth annual conference on Computer science February 1986

C.-Y. Chan , P. Felber , M. Garofalakis , R. Rastogi
The VLDB Journal — The International Journal on Very Large Data Bases December 2002
Volume 11 Issue 4
The publish/subscribe paradigm is a popular model for allowing publishers (i.e., data generators) to selectively disseminate data to a large number of widely dispersed subscribers (i.e., data consumers)

who have registered their interest in specific information items. Early publishing systems have typically relied on simple subscription mechanisms, such as keyword or "bag of words" matching, or simple comparison predicates on attribute values. The emergence of XML as a standard ...

6 The Web Service Discovery Architecture

77%

Wolfgang Hoschek

Proceedings of the 2002 ACM/IEEE conference on Supercomputing November 2002

In this paper, we propose the Web Service Discovery Architecture (WSDA). At runtime, Grid applications can use this architecture to discover and adapt to remote services. WSDA promotes an interoperable web service discovery layer by defining appropriate services, interfaces, operations and protocol bindings, based on industry standards. It is unified because it subsumes an array of disparate concepts, interfaces and protocols under a single semi-transparent umbrella. It is modular because it def ...

7 Special issue on the PAPA 2002 workshop: Performance study of dispatching algorithms in multi-tier web architectures

77%

Mauro Andreolini , Michele Colajanni , Ruggero Morselli

ACM SIGMETRICS Performance Evaluation Review September 2002

Volume 30 Issue 2

The number and heterogeneity of requests to Web sites are increasing also because the Web technology is becoming the preferred interface for information systems. Many systems hosting current Web sites are complex architectures composed by multiple server layers with strong scalability and reliability issues. In this paper we compare the performance of several combinations of centralized and distributed dispatching algorithms working at the first and second layer, and using different levels of st ...

8 Monitoring and debugging: Monitoring deployed software using software tomography

77%

Jim Bowring , Alessandro Orso , Mary Jean Harrold

Proceedings of the 2002 ACM SIGPLAN-SIGSOFT workshop on Program analysis for software tools and engineering November 2002

Software products are often released with missing functionality or errors that result in failures in the field. In previous work, we presented the Gamma technology, which facilitates remote monitoring of deployed software and allows for a prompt reaction to failures. In this paper, we investigate one of the principal technologies on which Gamma is based: software tomography. *Software tomography* splits monitoring tasks across many instances of the software, so that partial ...

9 MEP: a media event platform

77%

Daniel Olsson , Andreas Nilsson

Mobile Networks and Applications June 2002

Volume 7 Issue 3

Popular media events of today are likely to attract a big, live audience. Being part of a huge cricket audience, for example, knowing that the event is broadcast to perhaps millions of people, is a truly arousing experience. But the size of the audience and the complexity of events do not come without drawbacks. Spectators find it difficult to be at the right spot at the right time and to grasp the essentials of the on goings. We introduce a Media Event Platform, which combines various sources o ...

10 A categorization of classes based on the visualization of their internal structure: the class blueprint

77%

Michele Lanza , Stéphane Ducasse

ACM SIGPLAN Notices , Proceedings of the OOPSLA '01 conference on Object Oriented Programming Systems Languages and Applications October 2001

Volume 36 Issue 11

The reengineering and reverse engineering of software systems is gaining importance in software industry, because the accelerated turnover in software industry, because the accelerated turnover in software companies creates legacy systems in a shorter period of time. Especially understanding classes is a key activity in object-oriented programming, since classes represent the primary abstractions from which applications are built. The main problem of this task is to quickly grasp the purpose of ...

11 Properties and update semantics of consistent views

77%

Georg Gottlob , Paolo Paolini , Roberto Zicari

ACM Transactions on Database Systems (TODS) October 1988

Volume 13 Issue 4

The problem of translating view updates to database updates is considered. Both databases and views are modeled as data abstractions. A data abstraction consists of a set of states and of a set of primitive update operators representing state transition functions. It is shown how complex update programs can be built from primitive update operators and how view update programs are translated into database

- 12 The Purdue University network-computing hubs: running unmodified simulation tools via the WWW 77%
 Nirav H. Kapadia , José A. B. Fortes , Mark S. Lundstrom
ACM Transactions on Modeling and Computer Simulation (TOMACS) January 2000
Volume 10 Issue 1
This paper describes the Web interface management infrastructure of a functioning network-computing system (PUNCH) that allows users to run unmodified simulation packages at geographically dispersed sites. The system currently contains more than fifty university and commercial simulation tools, and has been used to carry out more than two hundred thousand simulations via the World Wide Web. Dynamically-constructed virtual URLs allow the Web interface management infrastructure to support the ...
- 13 Experiences of developing and deploying a context-aware tourist guide: the GUIDE project 77%
 Keith Cheverst , Nigel Davies , Keith Mitchell , Adrian Friday
Proceedings of the sixth annual international conference on Mobile computing and networking
August 2000
The GUIDE system has been developed to provide city visitors with a hand-held context-aware tourist guide. The system has been successfully deployed in a major tourist destination and is currently at the stage where it is publicly available to visitors who wish to explore the city. Reaching this stage has been the culmination of a number of distinct research efforts. In more detail, the development of GUIDE has involved: capturing a real set of application requirements, investigating the pr ...

 Henning Maass
Mobile Networks and Applications August 1998
Volume 3 Issue 2
Location-aware applications are becoming increasingly attractive due to the widespread dissemination of wireless networks and the emergence of small and cheap locating technologies. We developed a location

information server that simplifies and speeds up the development of these applications by offering a set of generic location retrieval and notification services to the application. The data model and the access protocols of these services are based on the X.500 directory service and the I ...
